

Acronis True Image v9 — backup (to minimize loss)

Acronis True Image v9 allows you to:

1. Backup a **whole hard disk** to compressed files (CD/DVD size),
2. Make a backup of important **folders/files (new in v9)**, or
3. **Clone** the contents of a whole disk to a newer, bigger one.

You can also **restore** the backups made in 1. and 2.

While you would normally store a backup on a separate disk, there's also a function called **Startup Recovery Manager**: if you have enough disk space then you can store the backup on your PC. If Windows cease to start up, you can hit a key during boot and use True Image to restore.

The above *Windows* version allows you to schedule backups.

It can also create a "Bootable Rescue CD" containing a stand-alone (*LINUX*) version of the program. Pro: Better if Windows not running when backup. Con: Support for some H/W like USB / Firewire external drives may be inferior to the Windows version. *Separate* companion product Disk Director has startup repair.

Vcom Fix-It v6 — speed up Windows? / forgot to backup?

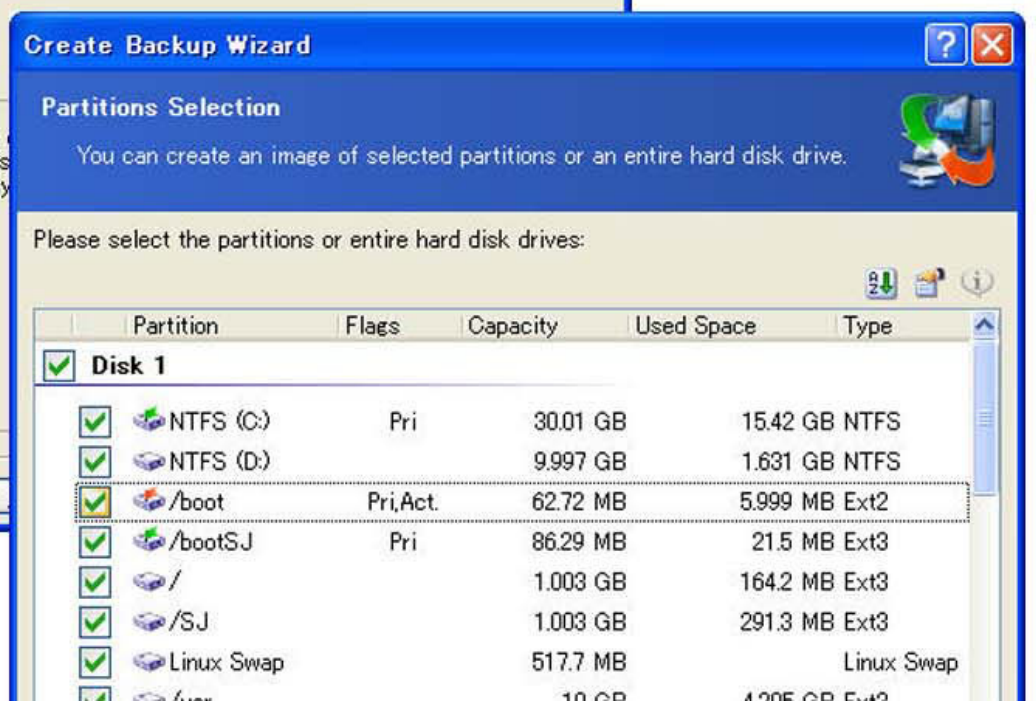

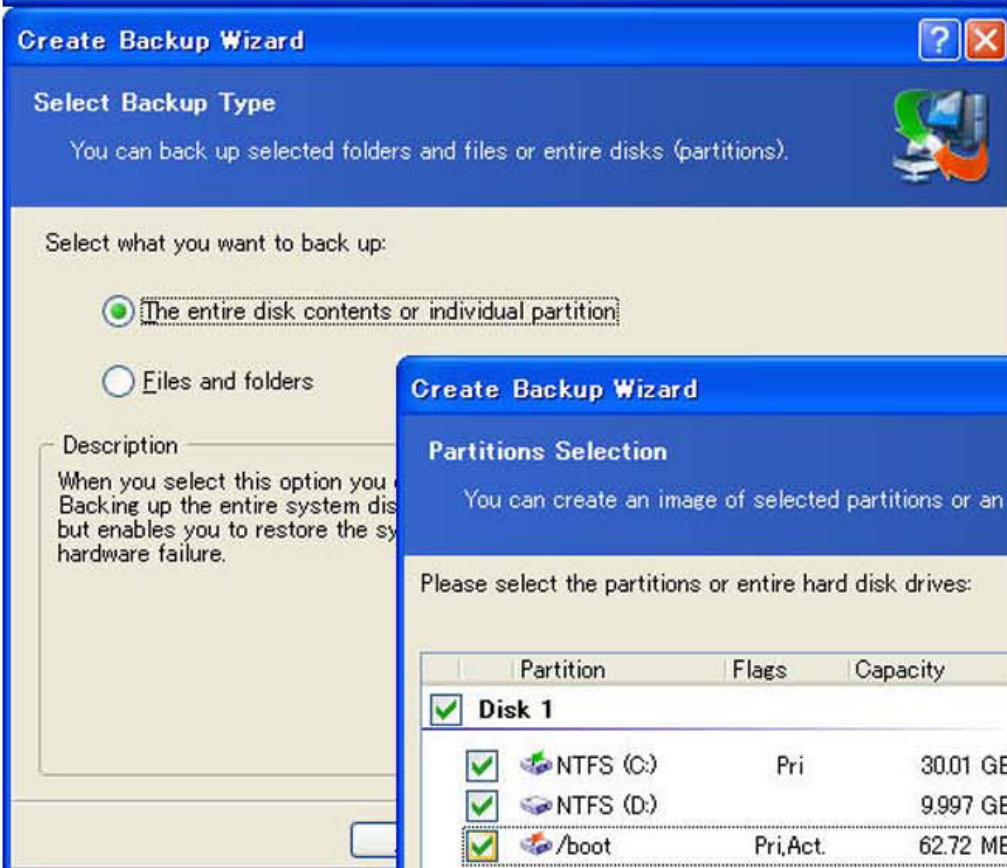

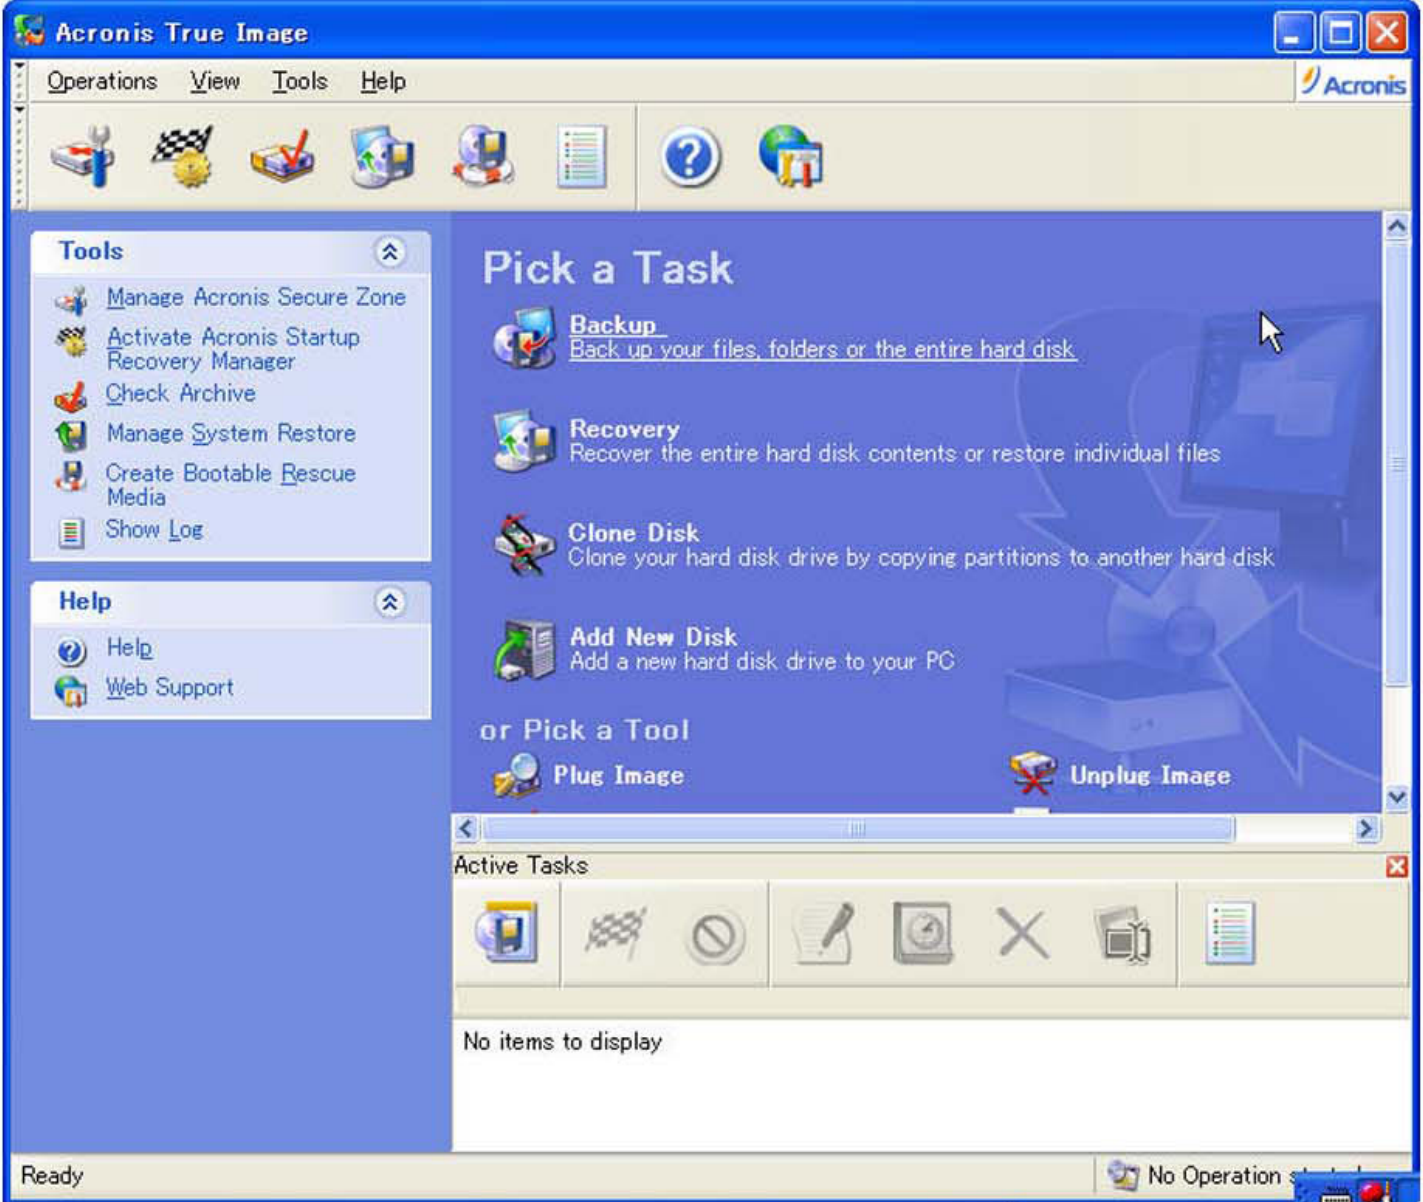

Want to speed up Windows? Forgot to backup, & PC won't boot? Vcom Fix-It is a "Swiss Army Knife" repair & speedup utility.

Vcom Fix-It v6 contains:

One-Stop Wizards to **Defrag./ Fix** disks & **Fix Registry** problems, Windows **Checkpoint** rollback functions, **Windows Startup Repair** functions (Basic **Rescue CD**), also a **Safe trash bin** whose **files** can be **undeleted**. **Anti-Virus** functions are an optional install.

Diskeeper v9 Pro — speed up Windows

Arguably the best Windows disk defragmenter. Microsoft includes an earlier stripped-down OEM version with Windows 2000/XP.
